

Solar ground mounting system

E-DELIVERY d.o.o.

Solar Logistic Company

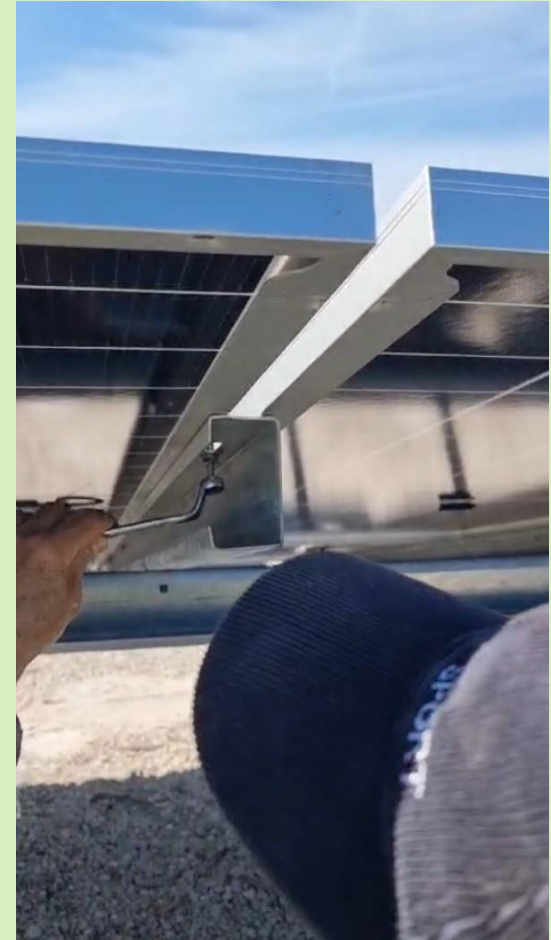

What are the problems with the installation a PV mounting system ?

- PV panels are getting bigger and bigger
- the high temperature on the upper side of the PV panel is getting higher
- it is no longer possible to install them without a ladder or walking on the panels
- the security of the installer is decreasing

How to prevent unwanted situations and speed up the installation process ?

- the solution is in the new design of the mounting system
- all installation of PV panels is done from the ground
- no ladder needed
- no need to walk on PV panels
- avoiding high temperatures from the upper side of the PV panel
- 100% safe for installers
- a very cheap solution
